

CHEMICAL FEEDER

Automatic Chlorinator Brominated In-Line Model

The chemical dosing unit has been designed for installation in the pool's return line for use with slow dissolving Tri-chlorine or Bromine tablets. The quantity of sanitizer is quickly adjusted to give the required residual by way of the easy to use inlet valve.

To avoid the build-up of gasses being trapped inside the feeder when the pump is shut off, it must be installed above water level and below the filter outlet. The manufacturer strongly recommends the installation of a non-return valve to protect the plant room from chemical attack, should the situation arise where water siphons back through the system.

ASCF9

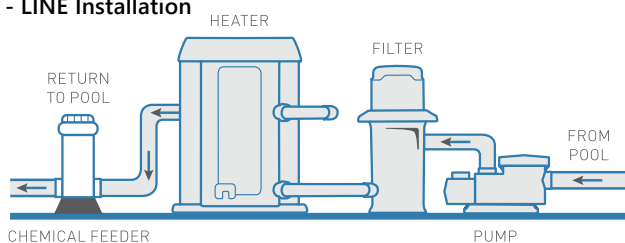

Technical Specification

- Connection: 1.5" Screw thread
- Max pressure: 4kg/cm²
- Max capacity: 4.5kg
- Max dosage: Chlorine - 35gr/hr
Bromine - 2gr/hr
- Recommended pool size: Chlorine - 20-80m³
Bromine - 4-50m³

IN - LINE AND OFF - LINE CONFIGURATIONS

To accommodate most capacity, plumbing and space considerations
